

Learn the Secrets of Lithium Disilicate . . . From a Master

Learn the Secrets of Lithium Disilicate . . . From a Master

Esthetic Dentistry and the patients' demand for metal-free restorations continues to be a growth trend. This trend leads to a demand for highly esthetic, biocompatible materials and fabrication techniques to meet this need. With a wide array of materials available to dental professionals, there is often confusion and questions in the market place centred around material selection. E.max lithium disilicate is a unique material that can meet patient demand and combines efficiency and art .

This practice-centered Masters Workshop focuses on the fundamental elements of esthetics and how to handle all-ceramics materials. One upper anterior unit and one posterior unit will be restored systematically and esthetically in this course with Ivoclar Vivadent's IPS e.max system. All steps will be shown comprehensively.

The participant is given the option to fabricate their substructures using either IPS e.max Press or e.max CAD materials.

The following topics will be covered in detail during this 1-day workshop:

- Analysis of tooth shade and shade composition
- Layering system
- Surface structure
- Level of surface luster

Bernhard Egger, a German born Master Dental Technician, received his Master craftsman diploma at the Munich College for Master of Dental Technology in 1990. Throughout his career, he has served on numerous boards, advisories, and faculties.

He worked as a Technical Advisor for Japanese SHOFU Dental Productions Inc, Charter Faculty member of the Orogathic International in Germany, Faculty member of the Orogathic Bioesthetic International Institute, Oregon, USA, and the Orogathic Bioesthetic Institute Canada. In 2008, Bernhard was nominated by the European Dental Association as Certified Specialist for Fixed Restorations. During his outstanding career, Bernhard has lectured, instructed courses and published in Europe, North America and Japan.

Friday, March 26, 2010
